Security + networking

Access keys

Encryption

Encryption

Encryption scopes

Storage service encryption protects your data at rest. Azure Storage encrypts your data as it's written in our datacenters, and automatically decrypts it for you as you access it.

Please note that after enabling Storage Service Encryption, only new data will be encrypted, and any existing files in this storage account will retroactively get encrypted by a background encryption process. [Learn more about Azure Storage encryption](#)

Encryption selection

Enable support for customer-managed keys ☐ Blobs and files only

Infrastructure encryption ☐ Disabled

Encryption type ☒ Microsoft-managed keys
☐ Customer-managed keys

net

Security + networking

Networking

Public access

Private endpoints

Network routing

Custom domain

Configure access to this storage account using Virtual Networks, IP address ranges, or a network security perimeter. [Learn more](#)

Associate a network security perimeter to secure public network access. [View recommendations](#)

Public network access ☐ Enabled from all networks

Manage

Network security perimeter

Associate a network security perimeter to centrally manage inbound and outbound access rules. [Learn more](#)

No network security perimeter has been associated

Associate

Resource settings: Virtual networks, IP addresses, and exceptions

Configure access rules to specify which networks can access this storage account. [Learn more](#)

Resource settings are not in effect. Public network access is enabled from all networks.
